Jane Farrall, Speech Pathologist, Spectronics
August 2011

The presentation that goes with this handout is at
www.spectronicsinoz.com/blog/workshops/the-ipad-as-assistive-technology/

The resources for this presentation are located on our Apple and Apps Related resources page at
www.spectronicsinoz.com/blog/apple/. We hope you find this page useful!

iPad basics
Please see the entry on iPad Basics on our blog. Of particular interest is the Macworld iPad2 Starter Guide.

App licencing

Using the iPad as Assistive Technology
The iPad is a fabulous learning and teaching and assistive technology tool. Of course, we always need to keep good practice in mind when using it. We always need to consider the student, the environment and the task when picking the best tool for each situation. Think about using the SETT framework or another similar model when making these decisions. You might also want to consider using an evaluation rubric for sorting and sharing information about apps. See an example at http://learninginhand.com/blog/evaluation-rubric-for-educational-apps.html. And always remember that the iPad is only a tool – we need to make the decisions about how to use it well and it isn’t suitable for everything and everyone.

And with around 750 new apps being submitted to Apple every day there is a lot of change in this area. Many of the resources listed in this handout keep track of specific areas of apps – helping you find out when new relevant apps are released. (See http://148apps.biz/app-store-metrics/ for App Store figures and numbers)

Apps for Literacy Development and Literacy Support
The iPad can be used to support both reading and writing goals within literacy. Consider using Digital Storybook apps to support early readers – apps such as How the Grinch Stole Christmas (from Oceanhouse Media), Blue Hat, Green Hat (from Loud Crow) and Sir Charlie Stinky Socks (from Kiwa Media) or Far to the North HD (from PicPocket Books). Books that have word-by-word highlighting can be helpful for emergent readers and writers. I have had enormous success with some students who have been really motivated by the word-by-word highlighting – but we need to make sure that we don’t continue to use word-by-word highlighting once students start to develop their literacy skills as we need to make sure that students develop appropriate eye movements (and we don’t move our eyes in a straight line from left to right as we become competent readers).

Use books like “When You Grow Up” from Stepworks to help students develop language and vocabulary concepts. And check out Digital Storytime for digital storybook app reviews and the Daily Deal Page.

Digital book apps are also available for adults. Our Choice, a digital version of the Al Gore book, is an example of a digital book app that makes use of several unique features available to digital books, rather than just being a recreation of a paper book.
Using the iPad as Assistive Technology

Apple’s own eBook reader, iBooks, is also a growing source for eBooks. The Australian store now has a much greater range, and children’s picture books are starting to appear in greater numbers. Check out iBooks such as “Baby Wombat’s Week”. Enhanced iBooks are also available (although small in number) and contain audio to go with the book. “Bach’s Farm Animals” is a free enhanced eBook that you can use to check out this format. You can also just search for enhanced books in the iBookstore to see the range. In the next update for iBooks there will also be the option of text-to-speech – but the book developer needs to enable this option so it will probably only work with limited books.

In addition, you can turn your own PPT or Word books and photo stories into PDFs or ePubs and install them in the iBookstore. I will be developing a step-by-step handout on how to do this and add it to our resources.

And Read2Go now offers an accessible eBook reader for readers with learning difficulties. I’ve done a review of this online at http://www.spectronicsinoz.com/blog/web-links/read2go-app-ready-set-read-for-students-with-learning-difficulties/. Students also need to become members of Bookshare to use this app.

And don’t forget that TarHeel Reader is now compatible with the iPad too.

Apps used in this section:

- How The Grinch Stole Christmas
- Blue Hat, Green Hat
- Sir Charlie Stinky Socks
- Far to the North HD
- When you Grow Up
- Our Choice

- iBooks
- Read2Go
- Hairy Maclary
- Five Little Monkeys
- Just Grandma & Me
- Animalia

There are a range of writing tools (and apps which can be used as writing tools) on the iTunes store. Check out Greg O’Connor’s list of Apps for Literacy Support for a list of his favourite tools in this area.

SpeakIt! Is one of my favourite apps for using the iPad as a pencil for developing writers. SpeakIt! Lets them write and hear as they write each sentence. The text can then be saved for future editing.

Pages is a full featured word processing app from Apple.

Typ-O HD is another favourite writing app. Typ-O HD has word prediction, speech support for both the writing and the word prediction and users can email the writing to themselves for future editing or to save.

Notability is a helpful app for students in secondary and tertiary study. It lets the user make a recording at the same time as they are taking notes. They can also supplement the notes with photos and other images. I wish I had had this app when I was studying.

Say Text is one of a range of apps designed to read out text from a photograph – these are designed for people with visual impairment but can also be very useful for people with learning difficulties. These apps generally work better on the iPhone – both because the iPhone has a flash to provide better illumination and also because the iPhone, as a smaller device, is easier to hold steady when taking a photo. There are a number of apps available in this category – see Anita Raftery’s list at http://www.spectronicsinoz.com/blog/web-links/iphone-ipad-and-itouch-apps-for-people-who-have-low-vision-and-teachers-of-students-who-have-a-vision-impairment/.
Using the iPad as Assistive Technology

**Dragon Dictation** is an app designed to convert your speech into text. An internet connection is required at all times for this app to work – and success is a little varied – but this can be a great tool.

There is also a range of handwriting apps available from the App Store – see Carol Harpold’s summary at [http://otswithapps.wordpress.com/2011/05/01/handwriting-apps-for-ots/](http://otswithapps.wordpress.com/2011/05/01/handwriting-apps-for-ots/). **iWrite Words** is an example of an app in this area.

The iPad can also be used to help students work on literacy goals in other areas too. For example, **Word Wall HD** can be used to help develop phonological awareness through onset rime (see [http://www.spectronicsinoz.com/article/onset-rime-word-families](http://www.spectronicsinoz.com/article/onset-rime-word-families) for more information on this).

Apps used in this section:
- Speakklt!
- Pages
- Typ-O HD
- Notability
- Say Text
- Dragon Dictation
- iWrite Words
- WordWall HD
- ABC Magic
- First Words Deluxe
- Magnetic Letters
- Word Magic

**Tips and Tricks**

Make sure that you become aware of the Settings within the iPad that can be useful. Look at restrictions – you can turn off deleting apps and restrict access to some other apps and features.

Go to Settings -> General -> Restrictions to look at the options that can be changed through the main iPad settings.

Also look at the settings within apps. Many special education specific apps have options to change the responsiveness of the touch screen that can help some students. For example, look at TapSpeak Sequence and the Tap/Touch settings.

Working through the MacWorld iPad 2 Starter Guide will also give you some other helpful tips and tricks.

(See the end of this handout for further links and resources in this area)

**Accessibility and Access**

Go to Settings -> General -> Accessibility to see the range of Accessibility Options built into the iPad.

Look at [Apple’s Accessibility](http://www.apple.com/accessibility/) documentation for the iPad and iPad 2. Also check **Luis Perez’s YouTube Channel** which has some great videos in this area and **David Woodbridge’s MP3s on VoiceOver** on the Vision Australia website.

Currently, alternative access to the iPad is very limited. Many of the mouse alternatives, such as the Tracker Pro, are not compatible with the iPad. There are a small number of joysticks available for the iPad – but these only work with apps, such as **Pac-Man**, which include an onscreen joystick. Currently this seems to be limited to game apps.

There are YouTube videos showing other alternative input apps which are currently being worked on. Some of these have been released e.g. **Breath Bird** – a Twitter input app which allows the user to type using their breath. As with all alternative access options for the iPad, the access method only works within the app itself.
Using the iPad as Assistive Technology

Currently there are two switch interfaces for the iPad. The **SwitchBox** (from Therapy Box – which is identical to the RJ Cooper switch interface) and the **Blue2** (from AbleNet). **RadSounds** is a cause and effect app. The majority of switch operated apps are AAC apps e.g. **TapSpeak Choice**, a symbol based AAC app with visual and auditory scanning that works with both the different interfaces. **Predictable** is a text based AAC app that works with the SwitchBox interface. Both of these apps also have the option of using the screen as the switch.

There are a number of styli also available for the iPad. A T-bar stylus and a mouthstick is available from [http://www.etsy.com/shop/shapedad](http://www.etsy.com/shop/shapedad). Styli compatible with the iPad have to be compatible with a capacitive screen.

Bluetooth keyboards can be used with the iPad and there are some cases available with an inbuilt Bluetooth keyboard e.g. **Logitech keyboard case**. In addition, many wired keyboards can be used with the help of the **Apple iPad camera connection kit**.

Keyguards for specific apps can also be purchased. **Lasered Pics** make a range of keyguards in both Perspex and Acrylic. **Yooralla Glenroy** also make Perspex keyguards.

The other information I covered in this area is included in my recent blog “**Access Options and Accessories for iPads….Gathering Strength as They Grow**”.

**Attainment Switch** is an app that lets you use your iPad as a wireless switch. I have successfully set this up to control Clicker 5 and other switch operated software on my PC and Mac.

Apps used in this section:
- **Pac-Man**
- **Breath Bird**
- **RadSounds**
- **TapSpeak Choice**
- **Predictable**
- **Attainment Switch**

**Accessories**

The iPad is a very cool piece of technology – but it isn’t necessarily durable or moisture proof. Accessories can provide extra protection in these areas – but can also have an impact on the “cool” factor.

The **Gumdrop Drop Series** cases and the **Otterbox Defender** are two examples of protective cases. Both make the iPad much more durable in case of accidents but add quite a bit of weight. The **iAdapter** is a protective case with inbuilt speaker and a cover for the home button.

ZAGG make a full body clear protector called the **Invisible Shield** which may provide some moisture protection and Tunewear make a very waterproof case called **Waterwear** which is designed for sailors and which should protect the iPad from rain.

The **BubCap** is a sticker that goes over the home button and makes it harder to press – available in two strengths.

Some of the information I covered in this area is included in my recent blog “**Access Options and Accessories for iPads….Gathering Strength as They Grow**”.

You can also look at the end of this handout for further links and resources in this area.
Using the iPad as Assistive Technology

**Apps for Language and Articulation**
There is a fast growing number of apps for various areas of speech therapy on the App Store. Lots of SLPs blog about apps – but a lot of them also develop them so you need to be aware that not all reviews are unbiased. Speech Gadget has a list of [Speech Therapy App Lists](http://www.speechgadgets.com/app_lists/Speech_Therapy_App_Lists.html) and [TherapyApp 411](http://therapyapp411.com/) is an app review site by a group of therapists.

Example language apps: Language Builder, Speech with Milo: Verbs, That's Silly
Example articulation apps: ArtikPix, ArticulateIt!

And, of course, there are a wide range of game and other apps which can be used in therapy – as in this great post from Geek SLP [http://www.geekslp.com/2011/04/angry-birds-educational-tool-beat-them-join-them/](http://www.geekslp.com/2011/04/angry-birds-educational-tool-beat-them-join-them/)

**Apps used in this section:**
- Language Builder
- Speech with Milo: Verbs
- That's Silly
- ArtikPix
- ArticulateIt!

**Apps for AAC**
There are over 100 AAC apps now on the iTunes store. I keep a list of these (with reviews) at [http://www.spectronicsinoz.com/article/iphoneipad-apps-for-aac](http://www.spectronicsinoz.com/article/iphoneipad-apps-for-aac)

There are three main categories of AAC apps – apps with symbol based displays, apps with text-to-speech and symbol displays and apps with text-to-speech and a large variation in the quality of these apps.

As well as apps that can be used directly for communication, there are also some apps which can support low/light tech AAC. [RIDBC Auslan Tutor](http://www.pacifica.com.au/) and [Baby Sign and Learn in Auslan](http://www.baby-sign.com/) can both be used to practice signing. Pic Card Maker can be used to make picture cards.

**Apps used in this section:**
- TapSpeak Sequence
- TouchChat HD
- Verbally
- RIDBC Auslan Tutor
- Baby Sign and Learn in Auslan
- Pic Card Maker

**Visual Support Apps**
There are a large number of apps which can be used as Visual Supports – and not all of these are specifically designed for this area. There are talking photo apps designed for family holiday snaps which work well for building social stories or making visual sequences. There are also a range of specifically designed visual support apps, such as First Then. Obviously, for each student we need to consider whether these provide enough of a visual cue for each student as the visual support app will be minimised when other apps are being used.

**Visual schedules:** First Then Visual Schedule, Picture Scheduler

Talking books and photo albums: Pictello, Click ‘n Talk

Rewards: ChorePad HD, Visual Grocery

Visual Timers: TimeTimer, ASD Timer

Other: iDress for Weather
Using the iPad as Assistive Technology

For a round up of some of the highlights in Visual Support apps please see [http://www.spectronicsinoz.com/blog/tools-and-resources/visual-support-apps-for-ipodipad/](http://www.spectronicsinoz.com/blog/tools-and-resources/visual-support-apps-for-ipodipad/)

Apps used in this section:
- **First Then Visual Schedule**
- **Picture Scheduler**
- **Pictello**
- **Click ‘n Talk**
- **ChorePad HD**
- **Visual Grocery**
- **TimeTimer**
- **ASD Timer**
- **iDress for Weather**
- **Scene Speak**

Organisational Apps

Again, there are a large number of apps that can be used to assist with organisational skills. There are many calendar, appointment and to do list apps, and there are a range which can have picture based reminders. This is likely to be an area which will expand in usefulness greatly when Apple releases iOS 5 later this year – as this operating system will enable reminders to be created with a GPS tag. This will enable the option of having a reminder triggered when a user arrives at a specific location. Some of the apps in other sections also belong in this area e.g. TimeTimer.

Apps used in this section:
- **myHomework**
- **VoCal**
- **PhotoMind**
- **Corkulous**

Other Apps

There are apps which can work on other skills such as fine motor skills, voice control or sensory apps.

For example:
- **Dexteria**
- **Bubbles**
- **Fish School**
- **Animal Sketch**
- **Paint Sparkles Draw**
- **Baby DJ**
- **Songify**
- **Web Reader HD**
- **Clicky Sticky**
- **HAL The Talking Calculator**
- **My Underwear**
- **Telling Time**
- **Telling Time – Digital**
- **Wheels on the Bus HD**
- **Clock Face Test Large**
- **Fruit Ninja HD**
- **Slide 2 Unlock**
- **Jungle Coins**
- **Toy Story**
- **Jumbo Calculator**

Users with Low Vision

In addition to the built-in accessibility options in the iOS there are a large number of apps specifically designed for users with low vision. Anita Raftery has done a fabulous summary of these at [http://www.spectronicsinoz.com/blog/web-links/iphone-ipad-and-itouch-apps-for-people-who-have-low-vision-and-teachers-of-students-who-have-a-vision-impairment/](http://www.spectronicsinoz.com/blog/web-links/iphone-ipad-and-itouch-apps-for-people-who-have-low-vision-and-teachers-of-students-who-have-a-vision-impairment/). She also includes information comparing the iPad, iPad2, iPod touch and the iPhone 4 as tools – including the usefulness of the camera built into each piece of hardware as a component of a magnification system.

For example:
- **Easy Reader**
Sources for Quality App Reviews
There are a range of sites which offer reviews of apps. Particularly, look for sites where apps are reviewed by teachers or special ed teachers, although Apps 4 Children with Special Needs does offer videos of apps which can be very helpful.

Please see the end of this handout for my suggestions and favourites.
